

Now Recruiting:

Postdoctoral fellowships

We have several openings for postdoctoral health services research fellowships. These 2-year, full-time fellowships provide an opportunity for individuals who have completed a MD/PhD or other doctoral degree to gain expertise and experience in health services research, with the goal of preparing fellows for a career in academia, government service, or industry.

We're recruiting fellows with research interests in:

- Employment of Persons with Physical Disabilities
- Community Living and Participation Grant

The program's executive committee will consider candidates whose research interests align with the National Institute on Disability, Independent Living, and Rehabilitation Research's long-range plan.

Fellows receive:

- Mentoring, protected research time, stipend (based on NIH guidelines), and fringe benefits
- Professional development opportunities, including funds for conference travel
- Tuition for course work

The fellowship program builds on the synergy between several Northwestern University entities, including Feinberg School of Medicine Departments of Physical Medicine and Rehabilitation, Psychiatry and Behavioral Sciences, Medicine, Pediatrics, Obstetrics, Emergency Medicine, Preventive Medicine, and Surgery; the Shirley Ryan AbilityLab; the Northwestern University Kellogg Graduate School of Management, Robert H. Lurie Cancer Center, Buehler Center for Health Policy and Economics, and McCormick School of Engineering and Applied Sciences.
